Learning Objectives
Upon completion of this lab, you will be able to:

- Determine the number of subnets needed.
- Determine the number of hosts needed.
- Design an appropriate addressing scheme.
- Assign addresses and subnet mask pairs to device interfaces and hosts.
- Examine the use of the available network address space.
- Determine how static routing could be applied to the network.

Scenario
In this lab, you have been given the network address 192.168.9.0/24 to subnet and provide the IP addressing for the network shown in the Topology Diagram. The network has the following addressing requirements:

- The BRANCH1 LAN 1 will require 10 host IP addresses.
- The BRANCH1 LAN 2 will require 10 host IP addresses.
- The BRANCH2 LAN 1 will require 10 host IP addresses.
- The BRANCH2 LAN 2 will require 10 host IP addresses.
- The HQ LAN will require 20 host IP addresses.
- The link from HQ to BRANCH1 will require an IP address for each end of the link.
- The link from HQ to BRANCH2 will require an IP address for each end of the link.

(Note: Remember that the interfaces of network devices are also host IP addresses and are included in the above addressing requirements.)

Task 1: Examine the Network Requirements.
Examine the network requirements and answer the questions below. Keep in mind that IP addresses will be needed for each of the LAN interfaces.

How many subnets are needed? __________
What is the maximum number of IP addresses that are needed for a single subnet? __________
How many IP addresses are needed for each of the branch LANs? __________
What is the total number of IP addresses that are needed? __________

Task 2: Design an IP Addressing Scheme.
Step 1: Subnet the 192.168.9.0 network into the appropriate number of subnets.
What will the subnet mask be for the subnetworks? ________________
How many usable host IP addresses are there per subnet? __________

Fill in the following chart with the subnet information:

<table>
<thead>
<tr>
<th>Subnet Number</th>
<th>Subnet Address</th>
<th>First Usable Host Address</th>
<th>Last Usable Host Address</th>
<th>Broadcast Address</th>
</tr>
</thead>
</table>
Step 2: Assign the subnets to the network shown in the Topology Diagram.

When assigning the subnets, keep in mind that routing will need to occur to allow information to be sent throughout the network. The subnets will be assigned to the networks to allow for route summarization on each of the routers.

1. Assign first subnet (lowest subnet) to the LAN connected to the Fa0/1 interface of BRANCH2. What is the subnet address? ____________________
2. Assign second subnet to LAN connected to the Fa0/1 interface of BRANCH2. What is the subnet address? ____________________
3. Assign third subnet to LAN connected to the Fa0/0 interface of BRANCH1. What is the subnet address? ____________________
4. Assign fourth subnet to LAN connected to the Fa0/1 interface of BRANCH1. What is the subnet address? ____________________
5. Assign fifth subnet to the WAN link from HQ to BRANCH1. What is the subnet address? ____________________
6. Assign sixth subnet to the WAN link from HQ to BRANCH2. ____________________
7. Assign seventh subnet to LAN connected to the Fa0/1 interface of HQ. What is the subnet address? ____________________

Note: The highest subnet will not be required in this topology.

Task 3: Assign IP Addresses to the Network Devices

Assign the appropriate addresses to the device interfaces. Document the addresses to be used in the Addressing Table provided under the Topology Diagram.

Step 1: Assign addresses to the HQ router.
1. Assign the first valid host address in the HQ LAN subnet to the LAN interface.
2. Assign the first valid host address in link from HQ to BRANCH1 subnet to the S0/0/0 interface.
3. Assign the first valid host address in link from HQ to BRANCH2 subnet to the S0/0/1 interface.

Step 2: Assign addresses to the BRANCH1 router.
1. Assign the first valid host address in the BRANCH1 LAN 1 subnet to the Fa0/0 LAN interface.
2. Assign the first valid host address in the BRANCH1 LAN 2 subnet to the Fa0/1 LAN interface.
3. Assign the last valid host address in link from HQ to BRANCH1 subnet to the WAN interface.

Step 3: Assign addresses to the BRANCH2 router.
1. Assign the first valid host address in the BRANCH2 LAN 1 subnet to the Fa0/0 LAN interface.
2. Assign the first valid host address in the BRANCH2 LAN 2 subnet to the Fa0/1 LAN interface.
3. Assign the last valid host address in link from HQ to BRANCH2 subnet to the WAN interface.

**Step 4: Assign addresses to the host PCs.**
1. Assign the last valid host address in the HQ LAN subnet to PC1.
2. Assign the last valid host address in the BRANCH1 LAN 1 subnet to PC2.
3. Assign the last valid host address in the BRANCH1 LAN 2 subnet to PC3.
4. Assign the last valid host address in the BRANCH2 LAN 1 subnet to PC4.
5. Assign the last valid host address in the BRANCH2 LAN 2 subnet to PC5.

**Task 4: Test the Network Design.**
Apply your addressing scheme. Check to see that all devices on directly connected networks can ping each other.

**Task 5: Reflection**
How many IP address in the 192.168.9.0 network are unused or unusable in this design? __________

What would the command be to add a default static route on the WAN interface of the BRANCH1 router?
___________________________________________________________________________________

Can both of the BRANCH1 LANs be summarized into one route on the HQ router? __________

What would be the command used to add this summary route to the routing table?
___________________________________________________________________________________

Can both of the BRANCH2 LANs be summarized into one route on the HQ router? __________

What would be the command used to add this summary route to the routing table?
___________________________________________________________________________________

Can the HQ LAN and both of the BRANCH1 LANs be summarized into one route on the BRANCH2 router? This summarized route should also include the link between the HQ and BRANCH1 routers. __________

What would be the command used to add this summary route to the routing table?

Learning Objectives
Upon completion of this lab, you will be able to:

- Determine the number of subnets needed.
- Determine the number of hosts needed.
- Design an appropriate addressing scheme.
- Assign addresses and subnet mask pairs to device interfaces and hosts.
- Examine the use of the available network address space.
- Determine how static routing could be applied to the network.

Scenario
In this lab, you have been given the network address 172.16.0.0/16 to subnet and provide the IP addressing for the network shown in the Topology Diagram. The network has the following addressing requirements:

- The Branch 1 LAN will require 100 host IP addresses.
- The Branch 2 LAN will require 100 host IP addresses.
- The Branch 3 LAN will require 100 host IP addresses.
- The Branch 4 LAN will require 100 host IP addresses.
- The West LAN will require 400 hosts.
- The East LAN will require 400 hosts.
- The HQ LAN will require 500 host IP addresses.
- The links between each of the routers will require an IP address for each end of the link.

(Note: Remember that the interfaces of network devices are also host IP addresses and are included in the above addressing requirements.)

The IP addresses for the link from the HQ router to the ISP have already been assigned. The Serial 0/2 address of the HQ router is 209.165.200.226/27. The IP address of the Serial 0/0 of the ISP router is 209.165.200.227/27.

Task 1: Examine the Network Requirements.
Examine the network requirements and answer the questions below. Keep in mind that IP addresses will be needed for each of the LAN interfaces.

How many subnets are needed? ____________
What is the maximum number of IP addresses that are needed for a single subnet? ____________
How many IP addresses are needed for each of the branch LANs? ____________
How many IP addresses are needed for all of the connections between routers? ____________
What is the total number of IP addresses that are needed? ____________

Task 2: Design an IP Addressing Scheme.
Step 1: Subnet the 172.16.0.0 network into the appropriate number of subnets.
What will the subnet mask be for the subnetworks? ________________
How many usable host IP addresses are there per subnet? ____________
Fill in the following chart with the subnet information.

<table>
<thead>
<tr>
<th>Subnet Number</th>
<th>Subnet IP</th>
<th>First Usable Host IP</th>
<th>Last Usable Host IP</th>
<th>Broadcast Address</th>

<tr>
<td>14</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>15</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Step 2: Assign the subnets to the network shown in the Topology Diagram.**

When assigning the subnets, keep in mind that routing will need to occur to allow information to be sent throughout the network. The subnets will be assigned to the networks to allow for route summarization on each of the routers.

Note: The lowest subnet (subnet 0) will not be assigned in this lab. You should start assigning with the second lowest subnet (subnet 1).

1. Assign subnet 1 to the Branch 1 LAN subnet: ____________________
2. Assign subnet 2 to the Branch 2 LAN subnet: ____________________
3. Assign subnet 3 to the link between the Branch 1 and Branch 2 routers: ____________________
4. Assign subnet 4 to the link between the Branch 1 and West routers: ____________________
5. Assign subnet 5 to the link between the Branch 2 and West routers: ____________________
6. Assign subnet 6 to the West LAN subnet: ____________________
7. Assign subnet 7 to the link between the West and HQ routers: ____________________
8. Assign subnet 8 to the HQ LAN subnet: ____________________
9. Assign subnet 9 to the link between the HQ and East routers: ____________________
10. Assign subnet 10 to the East LAN subnet: ____________________
11. Assign subnet 11 to the link between the Branch 3 and East routers: ____________________
12. Assign subnet 12 to the link between the Branch 4 and East routers: ____________________
13. Assign subnet 13 to the link between the Branch 3 and Branch 4 routers: ____________________
14. Assign subnet 14 to the Branch 3 subnet: ____________________
15. Assign subnet 15 to the Branch 4 subnet: ____________________
Task 3: Assign IP Addresses to the Network Devices.

Assign the appropriate addresses to the device interfaces. Document the addresses to be used in the Addressing Table provided under the Topology Diagram.

**Step 1: Assign addresses to the HQ router.**
1. Assign the first valid host address in the HQ LAN subnet to the LAN interface.
2. Assign the first valid host address in the link from HQ to West subnet to the S0/0/0 interface.
3. Assign the first valid host address in the link from HQ to East subnet to the S0/0/1 interface.

**Step 2: Assign addresses to the West router.**
1. Assign the first valid host address in the West LAN subnet to the LAN interface.
2. Assign the last valid host address in the link from HQ to West subnet to the S0/0/0 interface.
3. Assign the first valid host address in the link from West to Branch 1 subnet to the S0/0/1 interface.
4. Assign the first valid host address in the link from West to Branch 2 subnet to the S0/0/2 interface.

**Step 3: Assign addresses to the East router.**
1. Assign the first valid host address in the East LAN subnet to the LAN interface.
2. Assign the last valid host address in the link from HQ to East subnet to the S0/0/0 interface.
3. Assign the first valid host address in the link from East to Branch 3 subnet to the S0/0/1 interface.
4. Assign the first valid host address in the link from East to Branch 4 subnet to the S0/0/2 interface.

**Step 4: Assign addresses to the Branch 1 router.**
1. Assign the first valid host address in the Branch 1 LAN subnet to the LAN interface.
2. Assign the last valid host address in the link from West to Branch 1 subnet to the S0/0/0 interface.
3. Assign the first valid host address in the link from Branch 1 to Branch 2 subnet to the S0/0/1 interface.

**Step 5: Assign addresses to the Branch 2 router.**
1. Assign the first valid host address in the Branch 2 LAN subnet to the LAN interface.
2. Assign the last valid host address in the link from West to Branch 2 subnet to the S0/0/0 interface.
3. Assign the last valid host address in the link from Branch 1 to Branch 2 subnet to the S0/0/1 interface.

**Step 6: Assign addresses to the Branch 3 router.**
1. Assign the first valid host address in the Branch 3 LAN subnet to the LAN interface.
2. Assign the last valid host address in the link from East to Branch 3 subnet to the S0/0/0 interface.
3. Assign the first valid host address in the link from Branch 3 to Branch 4 subnet to the S0/0/1 interface.
Step 7 Assign addresses to the Branch 4 router.
   1. Assign the first valid host address in the Branch 4 LAN subnet to the LAN interface.
   2. Assign the last valid host address in the link from East to Branch 4 subnet to the S0/0/0 interface.
   3. Assign the last valid host address in the link from Branch 3 to Branch 4 subnet to the S0/0/1 interface.

Step 8 Assign addresses to the host PCs
   1. Assign the last valid host address in the HQ LAN subnet to PC1.
   2. Assign the last valid host address in the West LAN subnet to PC2.
   3. Assign the last valid host address in the East 1 LAN subnet to PC3.
   4. Assign the last valid host address in the Branch 1 LAN subnet to PC4.
   5. Assign the last valid host address in the Branch 2 LAN subnet to PC5.
   6. Assign the last valid host address in the Branch 3 LAN subnet to PC6.
   7. Assign the last valid host address in the Branch 4 LAN subnet to PC7.

Task 4: Test the Network Design.
Apply your addressing scheme. Check to see that all devices on directly connected networks can ping each other.

Task 5: Reflection

How many IP address in the 172.16.0.0 network are wasted in this design? __________

What would the command be to add a default static route for your entire network design from the HQ router to the ISP router?
___________________________________________________________________________________

Can the West, Branch 1, and Branch 2 networks be summarized into one route on the HQ router? This summarized route should also include the serial links that connect the West, Branch 1, and Branch 2 routers. __________

What would be the command used to add this summary route to the routing table?
___________________________________________________________________________________

Can the East, Branch 3, and Branch 4 networks be summarized into one route on the HQ router? This summarized route should also include the serial links that connect the East, Branch 3, and Branch 4 routers. __________

What would be the command used to add this summary route to the routing table?
___________________________________________________________________________________

What would the command be to add a default static route on the West router to send traffic for all unknown destinations to the HQ router?
___________________________________________________________________________________
What would the command be to add a default static route on the East router to send traffic for all unknown destinations to the HQ router?

___________________________________________________________________________________

Can the Branch 1 and Branch 2 networks be summarized into one route on the West router? This summarized route should also include the serial link that connects the Branch 1 and Branch 2 routers.

__________

What would be the command used to add this summary route to the routing table? Use the S0/0/1 interface of the West router as the exit interface.

___________________________________________________________________________________

Can the Branch 3 and Branch 4 networks be summarized into one route on the East router? This summarized route should also include the serial link that connects the Branch 3 and Branch 4 routers.

__________

What would be the command used to add this summary route to the routing table? Use the S0/0/1 interface of the East router as the exit interface.

___________________________________________________________________________________

The Branch 1 router requires a static route for traffic destined for Branch 2. All other traffic should be sent to the West router using a default static route. What commands would be used to accomplish this?

___________________________________________________________________________________

The Branch 2 router requires a static route for traffic destined for Branch 1. All other traffic should be sent to the West router using a default static route. What commands would be used to accomplish this?

___________________________________________________________________________________

The Branch 3 router requires a static route for traffic destined for Branch 4. All other traffic should be sent to the East router using a default static route. What commands would be used to accomplish this?

___________________________________________________________________________________

The Branch 4 router requires a static route for traffic destined for Branch 3. All other traffic should be sent to the East router using a default static route. What commands would be used to accomplish this?

Learning Objectives
Upon completion of this lab, you will be able to:

- Determine the number of subnets needed.
- Determine the number of hosts needed.
- Design an appropriate addressing scheme.
- Conduct research to find a possible solution.

Scenario
In this lab, you have been given the network address 192.168.1.0/24 to subnet and provide the IP addressing for the network shown in the Topology Diagram. The network has the following addressing requirements:

- The BRANCH1 LAN 1 will require 15 host IP addresses.
- The BRANCH1 LAN 2 will require 15 host IP addresses.
- The BRANCH2 LAN 1 will require 15 host IP addresses.
- The BRANCH2 LAN 2 will require 15 host IP addresses.
- The HQ LAN will require 30 host IP addresses.
- The link from HQ to BRANCH1 will require an IP address for each end of the link.
- The link from HQ to BRANCH2 will require an IP address for each end of the link.
- The link from HQ to BRANCH1 to BRANCH2 will require an IP address for each end of the link.

(Note: Remember that the interfaces of network devices are also host IP addresses and are included in the above addressing requirements.)

Task 1: Examine the Network Requirements.
Examine the network requirements and answer the questions below. Keep in mind that IP addresses will be needed for each of the LAN interfaces.

How many subnets are needed? __________
What is the maximum number of IP addresses that are needed for a single subnet? __________
How many IP addresses are needed for each of the branch LANs? __________
What is the total number of IP addresses that are needed? __________

Task 2: Design an IP Addressing Scheme
Subnet the 192.168.1.0/24 network into the appropriate number of subnets.

Can the 192.168.1.0/24 network be subnetted to fit the network requirements? __________
If the “number of subnets” requirement is met, what is the maximum number of hosts per subnet? __________
If the “maximum number of hosts” requirement is met, what is the number of subnets that will be available to use? __________
Task 3: Reflection

You do not have enough address space to implement an addressing scheme. Research this problem and propose a possible solution. Increasing the size of your original address space is not an acceptable solution. (Hint: We will discuss solutions to this problem in Chapter 6.)

____________________________________________________________________________
____________________________________________________________________________
____________________________________________________________________________

Attempt to implement your solution. Successful implementation of a solution requires that:

- Only the 192.168.1.0/24 address space is used.
- PCs and routers can ping all IP addresses.
